

For Immediate Release

DAHLE NORTH AMERICA OFFERS LASER GUILLOTINE
THE ULTIMATE IN ACCURACY AND PRECISION

Peterborough, NH, January 1, 2006 –In their quest for the perfect cutter, Dahle designs a Premium Guillotine with laser guide to ensure accuracy. No more guessing where the cut will be, the laser guide illuminates the entire length of the cutter with a bright red line. A state-of-the-art ratcheting paper clamp will allow up to 40 sheets of paper to be cut at a time and prevent undesirable fanning.

“Laser guides have been offered on power tools for years,” said Chuck Cannon, National Sales Manager, Dahle North America, Inc. “It’s the best way to know exactly where you are going to cut.”

Dahle’s laser guillotine is designed for heavy-duty applications where precision and safety are essential. The cutter’s massive ground Solingen Steel blade is protected by a rotary safety shield. This innovative safety device automatically covers the blade throughout the entire cutting process and prevents hands from being in the wrong place. With all of its features and the laser guide, this cutter is the preferred choice among picture framers, print shop and copy centers.

Dahle North America, Inc. is a fully integrated manufacturer and distributor of art and craft tools, business machines and office products with a brand name recognized for quality and precision. Dahle markets more than 300 products, including paper cutters and trimmers, cutting mats and scissors, and pencil sharpeners, for the home, office, and art markets.
